AUTHOR INDEX TO VOLUME 14

Issue	*Page*		
1	1	Allison, A.C.	Exponential-fitting methods for the numerical solution of the Schrodinger equation.
5	413	Amar, V.	Weight multiplicity for unitary groups.
3	261	Ardill, R.W.B.	Spherical Bessel functions jn and yn of integer order and real argument.
5	319	Bark, F.	Perturbation calculations for the spin up problem using REDUCE.
5	367	Berrington, K.A.	A new version of the general program to calculate atomic continuum processes using the R-matrix method.
3	273	Bird, B.	Inter-electron repulsion integrals for three-open-shell configurations in cubic symmetry.
1	109	Braunschweig, D.	Reduced SU(3) CFP'S.
5	367	Burke, P.G.	A new version of the general program to calculate atomic continuum processes using the R-matrix method.
1	133	Buttle, P.J.A.	DWBA program for heavy ion transfer reactions.
5	327	Callaway, J.	BNDPKG: a package of programs for the calculation of electronic energy bands by the LCGO method.
3	169	Cheng, C.Z.	Higher order multipoles and splines in plasma simulations.
5	423	Christiansen, J.P.	ATHENE 1: a one-dimensional equilibrium-diffusion code.
5	319	Cohen, I.	Perturbation calculations for the spin up problem using REDUCE.
3	273	Daul, C.	Inter-electron repulsion integrals for three-open-shell configurations in cubic symmetry.
3	287	Davies, A.J.	Simulation of the growth of axially symmetric discharges between plane parallel electrodes.
3	273	Day, P.	Inter-electron repulsion integrals for three-open-shell configurations in cubic symmetry.
1	7	Demmig, F.	The computation of one-dimensional unsteady non-equilibrium flows with a method of characteristics utilizing exponential fitting.
5	413	Dozzio, U.	Weight multiplicity for unitary groups.
3	299	Dudek, J.	A numerical calculation of multidimensional integrals.
3	287	Evans, C.J.	Simulation of the growth of axially symmetric discharges between plane parallel electrodes.
1	145	Fischer, C.F.	A general multi-configuration Hartree-Fock program.
3	255	Golden, L.B.	Exact Slater integrals.

Issue	Page		
3	313	Gosman, A.D.	Book review.
3	311	Grant, I.P.	Erratum notice. CFPJJ: fractional parentage coefficients for equivalent electrons in jj-coupling.
3	311	Grant, I.P.	Erratum notice. A program to calculate angular momentum coefficients in relativistic atomic structure - revised version.
5	447	Grant, I.P.	Book review.
3	193	Hansen, F.Y.	I. A computer program for generation of a complete set of coordinates and force matrices for normal mode calculations of crystals and molecules.
3	219	Hansen, F.Y.	II. A program for computing normal modes of molecules, crystal phonon dispersion relations and structure factors for neutron inela scattering.
3	245	Hansen, F.Y.	III. A force constant adjuster program to obtain a least squares to observed frequencies of molecules and crystals.
1	13	Huzinaga, S.	A compact program of the SCF-Xalpha scattered wave method.
3	185	Johnson, C.H.J.	On the estimation of the equilibrium properties of the kinetic Isi model of ferromagnetism.
1	13	Katsuki, S.	A compact program of the SCF-Xalpha scattered wave method.
3	177	Konrad, A.	An evaluation of the LACC program.
5	367	Le Dourneuf, M.	A new version of the general program to calculate atomic continuum processes using the R-matrix method.
5	423	Long, J.W.	ATHENE 1: a one-dimensional equilibrium-diffusion code.
1	99	McGreevy, E.	A program for calculating elastic scattering phase shifts for an electron colliding with a one-electron target using perturbation th
3	261	Moriarty, K. J. M.	Spherical Bessel functions jn and yn of integer order and real argument.
3	299	Nazarewicz, W.	A numerical calculation of multidimensional integrals.
5	315	Nerbrant, P.-O.	An application of SCHOONSCHIP for algebraic calculations in quantum chemistry.
3	169	Okuda, H.	Higher order multipoles and splines in plasma simulations.
5	413	Oleari, C.	Weight multiplicity for unitary groups.
1	13	Palting, P.	A compact program of the SCF-Xalpha scattered wave method.
1	1	Raptis, A.	Exponential-fitting methods for the numerical solution of the Schrodinger equation.
5	367	Robb, W.D.	A new version of the general program to calculate atomic continuum processes using the R-matrix method.
5	423	Roberts, K.V.	ATHENE 1: a one-dimensional equilibrium-diffusion code.

Issue	*Page*		
1	121	Salin, A.	Calculation of wave-functions and collision matrix elements for one-electron diatomic molecules.
1	71	Silver, D.M.	Diagrammatic many-body perturbation expansion for atoms and molecules: I. General organization.
1	81	Silver, D.M.	Diagrammatic many-body perturbation expansion for atoms and molecules: II. Second-order and third-order ladder energies.
1	99	Stewart, A.L.	A program for calculating elastic scattering phase shifts for an electron colliding with a one-electron target using perturbation theory.
3	267	Sunny, M.T.	Inner multiplicity of unitary groups.
5	367	Taylor, K.T.	A new version of the general program to calculate atomic continuum processes using the R-matrix method.
3	267	Thomas, S.	Inner multiplicity of unitary groups.
3	155	Ugniewski, S.	Reduction of data from line, differential and surface probes in axially symmetric experiments.
5	367	Vo Ky Lan	A new version of the general program to calculate atomic continuum processes using the R-matrix method.
5	327	Wang, C.S.	BNDPKG: a package of programs for the calculation of electronic energy bands by the LCGO method.
1	91	Wilson, S.	Diagrammatic many-body perturbation expansion for atoms and molecules: III. Third-order ring energies.
3	287	Woodison, P.M.	Simulation of the growth of axially symmetric discharges between plane parallel electrodes.
3	299	Zakrzewska, K.	A numerical calculation of multidimensional integrals.

PROGRAM INDEX TO VOLUME 14

Atomic Physics

Issue	*Page*	*Cat.no.*	
1	71	ACXF	MBPT ORGANIZATION (Fortran). Diagrammatic many-body perturbation expansion for atoms and molecules: I. General organization. D.M. Silver. Subroutines required by this program are ACXG 14(1978)81, ACXH 14(1978)91.
1	81	ACXG	MBPT LADDER DIAGRAMS (Fortran). Diagrammatic many-body perturbation expansion for atoms and molecules: II. Second-order and third-order ladder energ D.M. Silver. Subroutines required by this program are ACXF 14(1978)71, ACXH 14(1978)91.
1	91	ACXH	MBPT RING DIAGRAMS (Fortran). Diagrammatic many-body perturbation expansion for atoms and molecules: III. Third-order ring energies. S. Wilson. Subroutines required by this program are ACXF 14(1978)71, ACXG 14(1978)81.
1	99	ACYD	LAG 1 (Fortran). A program for calculating elastic scattering phase shifts for an electron colliding with a one-electron target using perturbation theory. E. McGree and A.L. Stewart.
1	121	ACXX	GRAVE (Fortran). Calculation of wave-functions and collision matrix elements for one-electron diatomic molecules. A. Salin.
1	121	ACXY	MEDOC (Fortran). Calculation of wave-functions and collision matrix elements fo one-electron diatomic molecules. A. Salin. Subroutine required by this program i ACXX 14(1978)121.
1	145	ACYA	MCHF77 (Fortran). A general multi-configuration Hartree-Fock program. C.F. Fischer. See other versions of this program ACQJ 1(1969)151, ACRF 4(1972)107.
3	255	ACYB	SLATER INTEGRALS (PL/1). Exact Slater integrals. L.B. Golden.
3	287	ABUU	SPARK2D (Fortran). Simulation of the growth of axially symmetric discharges between plane parallel electrodes. A.J. Davies, C.J. Evans and P.M. Woodison. S other version of this program ABUD 3(1972)322.
3	311	ACRI	000A CORRECTION 08/05/77 (Fortran). CFPJJ: fractional parentage coefficients for equivalent electrons in jj-coupling. I.P. Grant.
3	311	ACWE	000A CORRECTION 29/09/77 (Fortran). A program to calculate angular momentum coefficients in relativistic atomic structure - revised version. I.P. Grant
5	367	AAHF	A NEW VERSION OF RMATRX STG1 (Fortran). A new version of the general program to calculate atomic continuum processes using the R-matrix method. K.A. Berrington, P.G. Burke, M. Le Dourneuf, W.D. Robb, K.T. Taylor and Vo Ky Lan. Subroutines required by this program are AAHG 14(1978)367, AAH 14(1978)367. See other version of this program AAHA 8(1974)149.

Atomic Physics (cont.)

Issue	*Page*	*Cat.no.*	
5	367	AAHG	A NEW VERSION OF RMATRX STG2 (Fortran). A new version of the general program to calculate atomic continuum processes using the R-matrix method. K.A. Berrington, P.G. Burke, M. Le Dourneuf, W.D. Robb, K.T. Taylor and Vo Ky Lan. Subroutines required by this program are AAHF 14(1978)367, AAHH 14(1978)367. See other version of this program AAHB 8(1974)149.
5	367	AAHH	A NEW VERSION OF RMATRX STG3 (Fortran). A new version of the general program to calculate atomic continuum processes using the R-matrix method. K.A. Berrington, P.G. Burke, M. Le Dourneuf, W.D. Robb, K.T. Taylor and Vo Ky Lan. Subroutines required by this program are AAHF 14(1978)367, AAHG 14(1978)367. See other version of this program AAHC 8(1974)149.

General Purpose

3	261	ACXM	SPHBES (Fortran). Spherical Bessel functions jn and yn of integer order and real argument. R.W.B. Ardill and K.J.M. Moriarty.
3	267	AAAJ	IMUG (Basic). Inner multiplicity of unitary groups. S. Thomas and M.T. Sunny.
3	299	ACXU	KOROBO (Fortran). A numerical calculation of multidimensional integrals. K. Zakrzewska, J. Dudek and W. Nazarewicz.
5	413	AAAK	DAM AND DEGSUN (Fortran). Weight multiplicity for unitary groups. V. Amar, U. Dozzio and C. Oleari.

Molecular Physics

1	13	ACXN	MSXALPHA (Fortran). A compact program of the SCF-Xalpha scattered wave method. S. Katsuki, P. Palting and S. Huzinaga.
1	71	ACXF	MBPT ORGANIZATION (Fortran). Diagrammatic many-body perturbation expansion for atoms and molecules: I. General organization. D.M. Silver. Subroutines required by this program are ACXG 14(1978)81, ACXH 14(1978)91.
1	81	ACXG	MBPT LADDER DIAGRAMS (Fortran). Diagrammatic many-body perturbation expansion for atoms and molecules: II. Second-order and third-order ladder energies. D.M. Silver. Subroutines required by this program are ACXF 14(1978)71, ACXH 14(1978)91.
1	91	ACXH	MBPT RING DIAGRAMS (Fortran). Diagrammatic many-body perturbation expansion for atoms and molecules: III. Third-order ring energies. S. Wilson. Subroutines required by this program are ACXF 14(1978)71, ACXG 14(1978)81.
1	121	ACXX	GRAVE (Fortran). Calculation of wave-functions and collision matrix elements for one-electron diatomic molecules. A. Salin.
1	121	ACXY	MEDOC (Fortran). Calculation of wave-functions and collision matrix elements for one-electron diatomic molecules. A. Salin. Subroutine required by this program is ACXX 14(1978)121.
3	273	AAKT	TRIO (Fortran). Inter-electron repulsion integrals for three-open-shell configurations in cubic symmetry. B. Bird, C. Daul and P. Day.

Nuclear Physics

Issue	Page	Cat.no.	
1	109	ABKG	REDUCED SU(3) CFPS (Fortran). Reduced SU(3) CFP'S. D. Braunschweig. Subroutine required by this program is AACx 14(1978)109.
1	109	AACx	DATA FOR ABKG (Fortran). Reduced SU(3) CFP'S. D. Braunschweig.
1	133	ABMY	DAISY (Fortran). DWBA program for heavy ion transfer reactions. P.J.A. Buttle.

Plasma Physics

3	287	ABUU	SPARK2D (Fortran). Simulation of the growth of axially symmetric discharges between plane parallel electrodes. A.J. Davies, C.J. Evans and P.M. Woodison. S other version of this program ABUD 3(1972)322.
5	423	ABUT	ATHENE 1 (Fortran). ATHENE 1: a one-dimensional equilibrium-diffusion code. J.P. Christiansen, K.V. Roberts and J.W. Long. Subroutine required by this progr is ABUF 7(1974)245.

Quantum Chemistry

1	13	ACXN	MSXALPHA (Fortran). A compact program of the SCF-Xalpha scattered wave method. S. Katsuki, P. Palting and S. Huzinaga.
1	71	ACXF	MBPT ORGANIZATION (Fortran). Diagrammatic many-body perturbation expansion for atoms and molecules: I. General organization. D.M. Silver. Subroutines required by this program are ACXG 14(1978)81, ACXH 14(1978)91.
1	81	ACXG	MBPT LADDER DIAGRAMS (Fortran). Diagrammatic many-body perturbation expansion for atoms and molecules: II. Second-order and third-order ladder ener D.M. Silver. Subroutines required by this program are ACXF 14(1978)71, ACXH 14(1978)91.
1	91	ACXH	MBPT RING DIAGRAMS (Fortran). Diagrammatic many-body perturbation expansion for atoms and molecules: III. Third-order ring energies. S. Wilson. Subroutines required by this program are ACXF 14(1978)71, ACXG 14(1978)81.
3	273	AAKT	TRIO (Fortran). Inter-electron repulsion integrals for three-open-shell configuratio in cubic symmetry. B. Bird, C. Daul and P. Day.

Solid State Physics

3	193	ACXQ	FYCOOR (Fortran). I. A computer program for generation of a complete set of coordinates and force matrices for normal mode calculations of crystals and molecules. F.Y. Hansen. Subroutines required by this program are ACXR 14(1978)219, ACXS 14(1978)245.
3	219	ACXR	FYFRE (Fortran). II. A program for computing normal modes of molecules, crystal phonon dispersion relations and structure factors for neutron inelastic scattering. F.Y. Hansen. Subroutines required by this program are ACXQ 14(1978)193, ACXS 14(1978)245.

Solid State Physics (cont.)

Issue	*Page*	*Cat.no.*	
3	245	ACXS	FYADJ (Fortran). III. A force constant adjuster program to obtain a least squares fit to observed frequencies of molecules and crystals. F.Y. Hansen. Subroutines required by this program are ACXQ 14(1978)193, ACXR 14(1978)219.
5	327	ACXZ	BNDPKG (Fortran). BNDPKG: a package of programs for the calculation of electronic energy bands by the LCGO method. C.S. Wang and J. Callaway.
